

NORDSTROM

February 6, 2015

Subject: Merchandise Battery Information

Please forward as necessary

New: Does the UPC that you are shipping to Nordstrom contain a lithium-ion, lithium metal or rechargeable battery?

If so, Nordstrom requires the following information prior to shipping these batteries to Nordstrom. The Code of Federal Regulation 49 / HM 224F effective February 6, 2015, regulates the shipping of batteries containing lithium-ion or lithium metal or rechargeable batteries through the US Department of Transportation, the Federal Aviation Administration, and the Pipeline and Hazardous Safety Administration. The HM224F affects the process of how we ship your merchandise to our Customers.

Going forward:

- All Battery Information must be provided to 808 Traffic (808traffic@nordstrom.com) for any UPC containing lithium-ion, lithium metal or rechargeable batteries (provided inside or outside the item).
- Purchase Orders that arrive without this information may not be sold online or shipped from our full line stores.
- If you are a vendor that uses the same battery for the majority of items you ship (example: watches), submit just one battery information form.
- If you already use a battery information form, we can accept it as long as it includes all of the below information. If not, use the form below.

SECTION 1 - VENDOR INFORMATION	
Company Name	
Address
